

Create a Virtual Hard Disk and allocate the storage using virtual box.

Aim

To create a Virtual Hard Disk and allocate storage space to it using Oracle VM VirtualBox.

Procedure

1. **Open VirtualBox** and click **New** to start creating a virtual machine, entering the name, OS type/version, and allocating memory (RAM).
2. **Select "Create a Virtual Hard Disk Now"** and click **Create** to proceed to disk configuration.
3. **Choose the hard disk file type** (VDI, VHD, or VMDK), with VDI recommended as the default for VirtualBox.
4. **Select the storage allocation type** — either **Dynamically Allocated** (grows as needed) or **Fixed Size** (full space reserved immediately) — then specify the file location and disk size (e.g., 20 GB).
5. **Click Create** to generate the virtual hard disk, then verify it via **File → Tools → Virtual Media Manager** or under the VM's **Settings → Storage**.

OUTPUT:

Result

A Virtual Hard Disk was successfully created and storage was allocated using Oracle VM VirtualBox.
