

EXPRIMENT-2 A SIMPLE FLIGHT RESERVATION SYSTEM

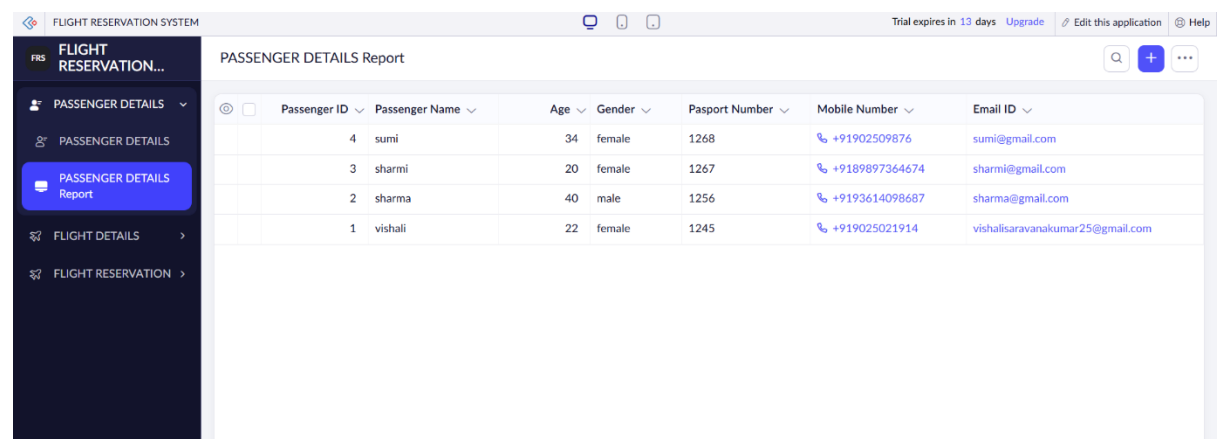

Aim:

To create a simple cloud-based Flight Reservation System using a cloud service provider to demonstrate the Software as a Service (SaaS) model.

Procedure:

1. Log in to the cloud platform (e.g., Zoho Creator).
2. Create a new application named **Flight Reservation System**.
3. Design a form to store flight details such as Flight Number, Airline, Source, Destination, Date, Time, Fare, and Available Seats.
4. Create a passenger registration form with details such as Passenger Name, Age, Gender, Phone Number, and Email.
5. Create a booking form to record flight reservations, travel date, seat selection, and payment status.
6. Generate reports to display available flights, booked tickets, and passenger booking history.
7. Save and deploy the application on the cloud platform.
8. Test the application by adding sample flight and passenger details and verify that the booking information is stored and accessed online.

2.1 PASSENGER DETAILS

The screenshot displays the 'FLIGHT RESERVATION SYSTEM' application interface. On the left is a dark sidebar with navigation options: 'PASSENGER DETAILS' (selected), 'PASSENGER DETAILS Report', 'FLIGHT DETAILS', and 'FLIGHT RESERVATION'. The main area shows a 'PASSENGER DETAILS Report' table with columns for Passenger ID, Passenger Name, Age, Gender, Pasport Number, Mobile Number, and Email ID. The table contains four rows of sample data.

Passenger ID	Passenger Name	Age	Gender	Pasport Number	Mobile Number	Email ID
4	sumi	34	female	1268	+91902509876	sumi@gmail.com
3	sharmi	20	female	1267	+9189897364674	sharmi@gmail.com
2	sharma	40	male	1256	+9193614098687	sharma@gmail.com
1	vishali	22	female	1245	+919025021914	vishalisaravanakumar25@gmail.com

Result:

A cloud-based Flight Reservation System was successfully created and deployed. The application enables users to search flights, book tickets, and manage reservation details online, demonstrating the Software as a Service (SaaS) model in cloud computing.
